Why choose

LEDON Tube Slides?

Customised modular solutions

On-site unique adjustable support system

Project-specific assembly instructions

Temperature resistant and UV-protected material

Fast production and delivery times

Tube elements according to EN 1176 and certified by TÜV

What makes

LEDON Tube Slides

unique?

Tailored modular design

With 11 different tube elements and five color options, we offer near-limitless configurations. Whether integrated into an existing structure or used in a new project, our modular design ensures that the final solution fits both the aesthetic and the physical parameters of your specific project.

On-site adjustable support system

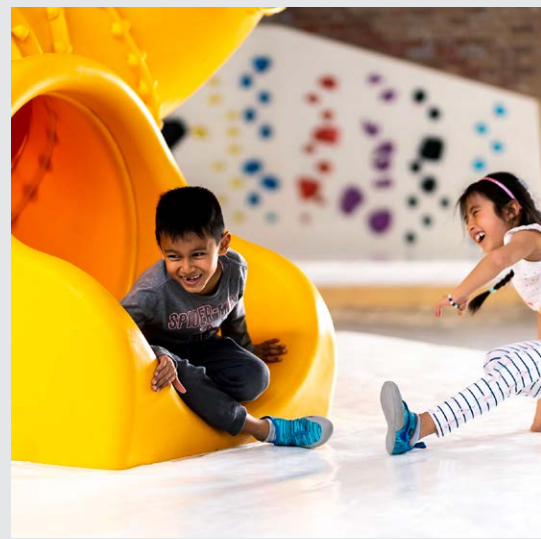

Our flexible support system allows precise height adjustment at the connection point to the slide itself. This eliminates the need for modifications at the foundation level, saving time and ensuring assembly accuracy. In addition, the exit section can be adjusted by up to 3,5° to each side, allowing seamless adaptation to the terrain without altering the ground surface.

Exceptional service and documentation

Each tube slide is delivered with project-specific, detailed assembly instructions to support an efficient and correct installation. We offer design consultancy, 3D visualisations and support throughout the process.

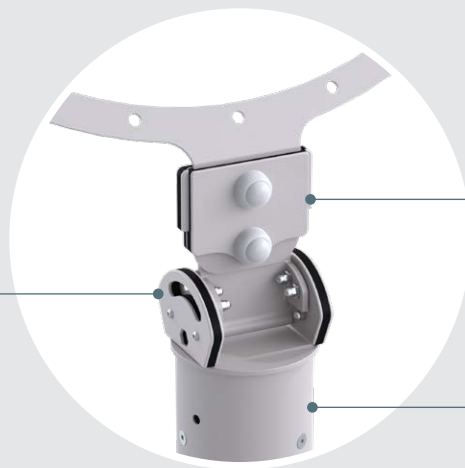

Certified safety and Danish quality

LEDON Tube Slides are produced in Denmark from low-maintenance, recyclable polyethylene. All components are certified by TÜV SÜD and conform to EN 1176 safety standards.

Highlights

Ensures better stability to the tube slide

Adjustable in all directions, which provides more flexibility

The support post can be placed vertical in almost all situations, which improves the overall appearance and performance

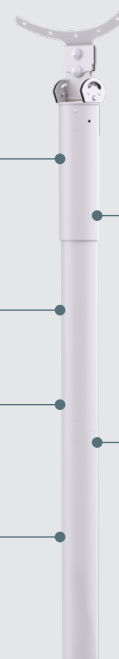

Able to support and to ensure stability to larger structures due to endless length and bigger diameter

Available in two diameters: Ø76mm and Ø127mm

Hot dip galvanized and powder coated

Can be delivered to all heights

Easy to adjust in height when mounting

Delivered in sections that are easy to transport

Custom-made start panel

11 tube elements and five colors options gives near-limitless configurations

Impact-resistant polycarbonate

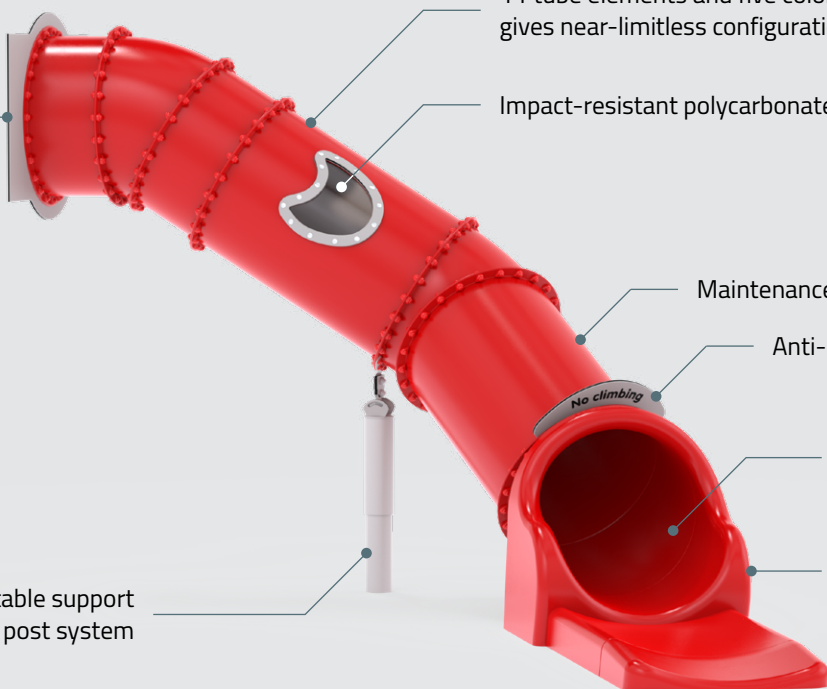

Maintenance-free polyethylene

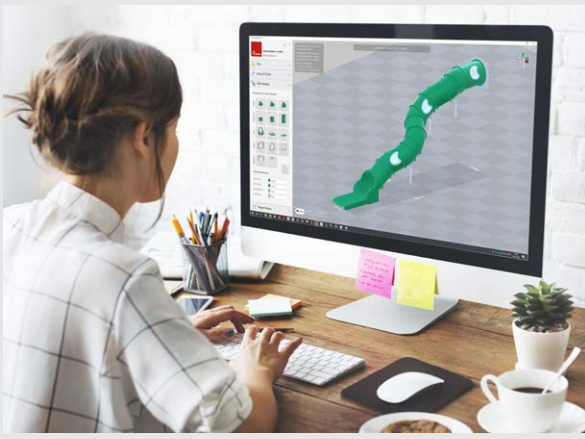

Anti-climb panel and sign

Wide internal diameter of Ø78 cm

3,5-degree side adjustment of exit section

Adjustable support post system

From idea to completed slide

1 Dialogue and needs assessment

We start by understanding your needs, dimensions and application. Whether it's a retrofit or a brand-new project, our team supports you from the very beginning.

2 Concept and 3D visualisation

We prepare a 3D visualisation using our in-house 3D construction program, SlideMaker. This gives you a precise preview of the slide configuration. You can also receive the 3D model in various file formats for integration into your own project drawings.

3 Quotation and design finalisation

You will receive a clear quotation along with drawings and documentation. Adjustments can be made until everything fits exactly to your project.

4 Production and delivery

Production is carried out in Denmark using high-quality materials. Our delivery time is only four to five weeks and often shorter.

5 Assembly and support

We offer fully or partially pre-assembled deliveries to ease on-site installation. Assembly instructions are specific to your project to ensure a smooth installation.

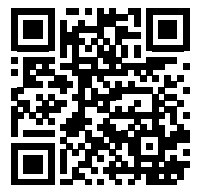

The original tube slide

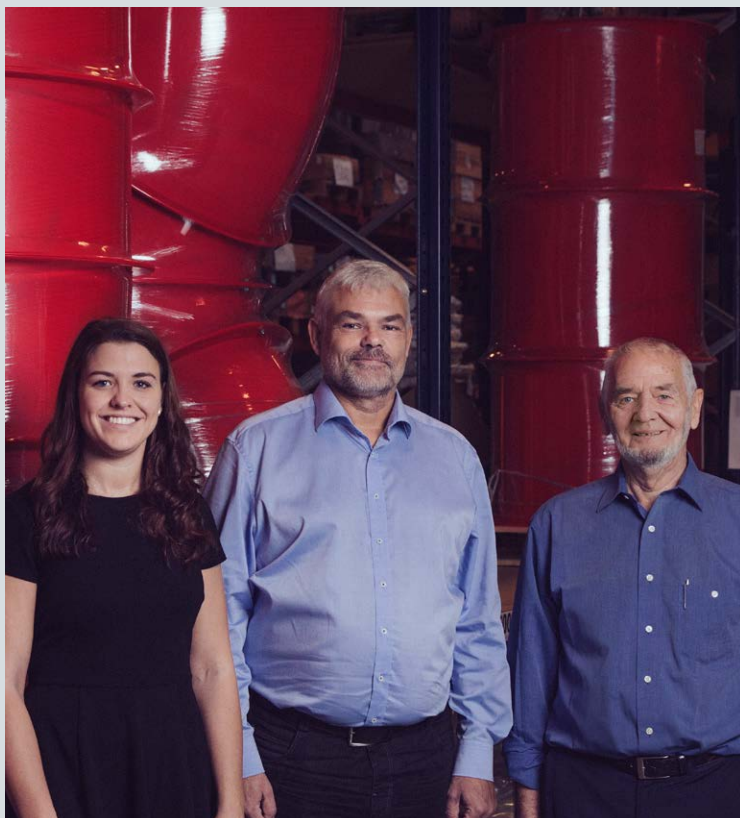

More than 25 years ago, we introduced the LEDON Tube Slides and have since led the market in providing customised tube slide solutions. As a result, architects, playground designers, and manufacturers trust LEDON for reliable quality, personal support and proven solutions.

LEDON

A family-owned company for three generations

LEDON is a family business that has produced Danish quality playground equipment for three generations to large parts of the world. For over 50 years, play value, good craftsmanship and quality have gone hand in hand.

The development of our tube slides started over 25 years ago, and we still use the same high-quality materials and modular design today, as it keeps proving its worth even decades later. Our continuous technological improvements also means that our expertise has kept up with the times, and we continue to deliver solutions that make dreams come true.
